Here, you can find everything you expect to see in a National Park! Snow covered mountains, waterfalls, lakes, rivers, canyons, meadows, herds of buffalos, elks and the most amazing geothermal features in the world! Geysers, hot springs, fumaroles, and mud pots are the true wonders that make Yellowstone truly unique. We will spend the night in East Yellowstone or West Yellowstone.

Itinerary:

Salt Lake City → Yellowstone National Park (3 hours, Head to visit Palette, Grand Prismatic Hot Spring, Old Faithful Geyser, Fountain Trail, Morning Glory and other attractions. The tour guide will be adjusted according to the actual situation of the day, please refer to the actual arrangement.)

Afternoon

Yellowstone National Park

Yellowstone National Park, the first national park in the United States, it is a true gem that you will not want to miss out on! Yellowstone offers spectacular scenic views year-round and a chance to watch animals that migrate in and out of the park! No matter where you are in the park you will get to see these some spectacular animals! Here you will find bears, wolves, moose, elk, bison and more!

The Grand Prismatic Hot Spring

The Grand Prismatic Spring, with approximately 370 feet (110 m) in diameter and is 160 feet (50 m) deep, which discharges an estimated 560 US gallons (2,100 L) of 160 °F (70 °C) water per minute. It is the largest hot spring in the United States, and the third largest in the world. The vivid colors in the spring are the result of microbial mats around the edges of the mineral-rich water. The mats produce colors ranging from green to red; the amount of color in the microbial mats depends on the ratio of chlorophyll to carotenoids and on the temperature gradient in the runoff. In the summer, the mats tend to be orange and red, whereas in the winter the mats are usually dark green. The center of the pool is sterile due to extreme heat.

Fountain Paint Pot

The Fountain Paint Pot is named for the reds, yellows and browns of the mud in this area. The differing colors are derived from oxidation states of the iron in the mud. As with all hot springs, the heat in the caldera forces pressurized water up through the ground, which is expelled here. Also, rising gasses cause the bubbling action. The bubble action in the mud varies with the seasons.

Old Faithful Geyser

Old Faithful is a cone geyser in the Upper Geyser Basin of Yellowstone National Park. It is one of the park's most well-known natural features and is famous for its predictability. It generally erupts every 91 minutes.

All day

Yellowstone National Park

Yellowstone National Park, the first national park in the United States, it is a true gem that you will not want to miss out on! Yellowstone offers spectacular scenic views year-round and a chance to watch animals that migrate in and out of the park! No matter where you are in the park you will get to see these some spectacular animals! Here you will find bears, wolves, moose, elk, bison and more!

Yellowstone Norris Geyser Basin

Norris Geyser Basin, named after an early Yellow-stone Superintendent, may be the hottest geyser basin in Yellowstone. The stark, barren landscape of Porcelain Basin is the result of an acidic environment. Due to the hostile condition plants, algae and bacteria have difficulty in establishing themselves. Instead the basin derives its colors from mineral oxides, in spectrums of pink, red, orange (iron oxides) and yellow (sulfur and iron sulfates). The largest geyser in the world is located here. Steamboat Geyser has long periods of dormancy, but when it does erupt it sends jets of water nearly 380 feet high in a spectacular display.

Upper Yellowstone Falls

Located a quarter-mile upstream of the larger Lower Falls, the Upper Yellowstone River Falls plunge 109 feet down an eroded lava cliff into the basin below. The area below the falls has been subject to heavier erosion than above.

Artist Point

Artist Point is one of the most spectacular scenic areas in the Canyon Area of the Park. The sheer walls drop 700 feet to the bottom of the canyon. Upriver the powerful Lower Falls are still in view. Downriver the canyon widens and deepens to a maximum of 1,540 feet. The canyon walls are predominantly yellow but colors of blue, red, orange and brown are also present. The colors are ever changing and especially intensified when the sunshine's after a rain.

Mud Volcano Area

The Mud Volcano blew itself apart in the early 20th century, but visitors can still see the impressive crater and other geothermal features in the surrounding area, such as the Mud Cauldron, Black Dragon's Caldron, and Dragon's Mouth Spring.

The resulting caldera filled with water, creating the bay.

Grand Teton National Park

Grand Teton National Park is located in the Rocky Mountains, Northwest Wyoming. Grand Teton National Park is noted for its stunning mountain vistas and its shimmering alpine lakes. It is also home to a variety of abundant wildlife.

Elk Antler Arches Park

Elk Antler Arches Park has four arches and is made with thousands of elk antlers that make it so unique. It is such an amazing place to discover filled with unforgettable memories.

Afternoon

Great Salt Lake

Great Salt Lake, lake in northern Utah, U.S., the largest inland body of salt water in the Western Hemisphere and one of the most saline inland bodies of water in the world. The lake is fed by the Bear, Weber, and Jordan rivers and has no outlet. The lake has fluctuated greatly in size, depending on the rates of evaporation and the flow of the rivers that feed it. Like the Dead Sea, the Great Salt Lake exists within an arid environment and has chemical characteristics similar to that of the oceans. It has a much greater salinity than the oceans, however, since natural evaporation exceeds the supply of water from the rivers feeding the lake.
