It will depict the Oglala Lakota warrior, Crazy Horse, riding a horse and pointing to his tribal land. The monument is being carved out of Thunderhead Mountain, on land considered sacred by some Oglala

Lakota, between Custer and Hill City, roughly 17 miles (27 km) from Mount Rushmore. The monument has been in progress since 1948 and is far from completion. If completed as designed, it will become the world's second tallest statue, after the Statue of Unity.

Mount Rushmore National Memorial is centered around a sculpture carved into the granite face of Mount Rushmore. Mount Rushmore features 60-foot sculptures of the heads of four United States presidents: George Washington, Thomas Jefferson, Theodore Roosevelt and Abraham Lincoln.

Devil's Tower

Devils Tower is a laccolithic butte composed of igneous rock in the Bear Lodge Mountains. The name Devil's Tower originated in 1875 during an expedition led by Colonel Richard Irving Dodge, when his interpreter reportedly misinterpreted a native name to mean "Bad God's Tower". All information signs in that area use the name "Devils Tower", following a geographic naming standard whereby the apostrophe is omitted.

All day

Yellowstone National Park

Yellowstone National Park, the first national park in the United States, it is a true gem that you will not want to miss out on! Yellowstone offers spectacular scenic views year-round and a chance to watch animals that migrate in and out of the park! No matter where you are in the park you will get to see these some spectacular animals! Here you will find bears, wolves, moose, elk, bison and more!

Yellowstone Norris Geyser Basin

Norris Geyser Basin, named after an early Yellow-stone Superintendent, may be the hottest geyser basin in Yellowstone. The stark, barren landscape of Porcelain Basin is the result of an acidic environment. Due to the hostile condition plants, algae and bacteria have difficulty in establishing themselves. Instead the basin derives its colors from mineral oxides, in spectrums of pink, red, orange (iron oxides) and yellow (sulfur and iron sulfates). The largest geyser in the world is located here. Steamboat Geyser has long periods of dormancy, but when it does erupt it sends jets of water nearly 380 feet high in a spectacular display.

Old Faithful Geyser

Old Faithful is a cone geyser in the Upper Geyser Basin of Yellowstone National Park. It is one of the park's most well-known natural features and is famous for its predictability. It generally erupts every 91 minutes.

The Grand Prismatic Hot Spring

The Grand Prismatic Spring, with approximately 370 feet (110 m) in diameter and is 160 feet (50 m) deep, which discharges an estimated 560 US gallons (2,100 L) of 160 °F (70 °C) water per minute. It is the largest hot spring in the United States, and the third largest in the world. The vivid colors in the spring are the result of microbial mats around the edges of the mineral-rich water. The mats produce colors ranging from green to red; the amount of color in the microbial mats depends on the ratio of chlorophyll to carotenoids and on the temperature gradient in the runoff. In the summer, the mats tend to be orange and red, whereas in the winter the mats are usually dark green. The center of the pool is sterile due to extreme heat.

The lake is fed by the Bear, Weber, and Jordan rivers and has no outlet. The lake has fluctuated greatly in size, depending on the rates of evaporation and the flow of the rivers that feed it. Like the Dead Sea, the Great Salt Lake exists within an arid environment and has chemical characteristics similar to that of the oceans. It has a much greater salinity than the oceans, however, since natural evaporation exceeds the supply of water from the rivers feeding the lake.
